PARROT DF7630

Wireless digital photo frame

Display and share all your photos with just a single frame - the Parrot DF7630. With this wireless frame, you can easily transfer your photos from your mobile phone, PC or Mac® via *Bluetooth*. You can also make the most of the photos stored on your digital camera thanks to the SD/MMC card slot or on any computer via the mini USB cable.

The contemporary photo album

Just like an electronic album, the Parrot DF7630 stores and displays up to 400 photos in its internal memory. You can do what you want - display your favourite photo, create your own slideshow or let the frame scroll all your photos itself.

Quality souvenirs

The Parrot DF7630 will let you relive all your memories thanks to the very latest in display technology. The wide LCD screen with a 15 cm diagonal measurement displays up to 262 144 shades of colour. Your photos will keep all the contrast and realism that make them unique, down to the slightest details. Adjust the brightness yourself for maximum clarity.

A sleek design

With subtlety and class, the finish of the Parrot DF7630 frame will delight all your guests. The interchangeable surround can be swapped to suit your mood. Choose from a collection of equally elegant surrounds to match your personality (optional extra). All the surrounds will show your memories at their finest.

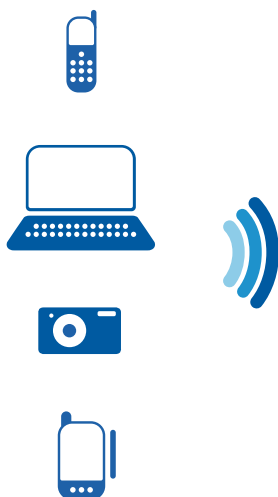

Unbridled pleasure

Share, admire and dream - the Parrot DF7630 frame does the rest. By easily setting the time at which you want the Parrot DF7630 to automatically switch on and off every day, you will stop wasting energy!

As if by magic...

Whether placed horizontally or vertically, your Parrot DF7630 frame keeps all its charm. The photos are automatically rotated and resized according to the frame's position. Nothing to do, except admire. More magical still - send your photos directly from your mobile phone to the Parrot DF7630 and, from the comfort of your sofa, admire your photo as it gradually takes shape on the frame.

Your memories on their finest day

Wireless technology

The *Bluetooth* wireless technology enables voice and data to be sent via a short distance radio link. It connects a wide range of electronic equipment without requiring additional cables. Furthermore, it extends the communication possibilities for mobile phones and a large number of devices. The *Bluetooth* Stereo (A2DP) profile uses the same short distance radio frequencies to transport musical files from one peripheral to another one.

Technical and commercial specifications

PARROT DF7630

High-resolution *Bluetooth* digital photo frame
