Follow the guide

The CK3300 Bluetooth® hands-free kit features a GPS module enabling drivers to combine navigation with onboard telephony. When users get in their car, they simply need to place the PDA or Smartphone in its cradle and follow the instructions over the speakers. When they leave their car, they only need to take the PDA with them.

View your mobile phone's information on the LCD screen

The kit displays the mobile phone's information on an LCD screen: incoming call number, phonebook, last number called, and so on. The ingenious screen can be installed wherever users want on the dashboard and provides an optimized viewing angle for greater comfort and readability.

Turn your car into a top-of-the-range communications centre

The kit is installed by a professional and fits seamlessly into your vehicle. In the event of a call, the radio cuts out to make way for your conversation. The car's speakers reproduce the caller's voice. The microphone captures the sound of your voice while filtering out the surrounding noise. Voice recognition allows drivers to make calls while keeping their hands on the wheel.

Take advantage of a universal Bluetooth® solution

The CK3300 is compatible with all navigation software, PDAs, Smartphones and Bluetooth® mobile phones on the market.
