

Parrot PHOTO VIEWER 7"

wireless *Bluetooth*® photo frame

www.parrot.com

The *Bluetooth* digital photo frame

Display and share your most beautiful pictures by sending them from your *Bluetooth* mobile phone, *Bluetooth* digital cameras or PC to the Parrot PHOTO VIEWER 7". Say goodbye to plugging in and pulling out memory cards and connecting wires... all the photos are easily transferred by *Bluetooth* v2.0 without a single cable or memory card in sight.

Portraits... landscapes...

The Parrot PHOTO VIEWER 7" can be used both horizontally and vertically, according to requirements. All the photos and pictures stored will automatically be rotated and resized to match the position of the digital photo frame.

High-resolution digital colour screen

Your memories deserve the very best in display technology. The wide 15 cm TFT screen displays up to 262 144 shades of colour for bright, contrasting photos with a resolution of 720x480 pixels. The display can be customised by adjusting the brightness.

Brightness suited to all surroundings

The backlight of the Parrot PHOTO VIEWER 7" screen adjusts to the brightness of your rooms. The optical sensor acts like a dimmer switch; it increases or reduces the screen brightness according to the surrounding light. Less light at night, more light during the day.

Remembering your memories in a slideshow

The Parrot PHOTO VIEWER can store and display over 500 photos and pictures in JPEG format. Regardless of your photo's size and resolution, the Parrot digital frame automatically adapts it to the TFT screen. Then choose the required photo or all the photos one after the other for a slideshow.

Contemporary design

The surround frame of the Parrot PHOTO VIEWER 7" uses traditional materials suited to every lifestyle: a variety of leather with different finishes and solid wood from the most elegant sources.
