Parrot MINIKIT *Smart* Get more out of your Smartphone

Making calls couldn't be easier

The first time you use the Parrot MINIKIT *Smart*, it synchronizes its phonebook with your cell's phonebook. The entries in your MINIKIT *Smart* phonebook are then effortlessly updated every time you connect. Its integrated speech synthesis function means that you hear the device saying your contact's name and you confirm that you want to make the call without taking your eyes off the road. You can also make calls via speech synthesis: press the green button, say the name of the person you want to call... and the MINIKIT *Smart* starts dialing automatically. If a person has several phone numbers, you can choose the number you wish to call by saying "mobile", "work" or "home".

Find your way every time

When you connect your Smartphone to the MINIKIT *Smart*, it is automatically connected via *Bluetooth*. The verbal instructions from your navigation system are transmitted with top sound quality via the 2W speaker. When you receive a call, the navigation instructions are interrupted automatically and then resumed when you end your call*. Thanks to its large holder, you will be able to see your Smartphone screen all the time. Now, you can follow your journey even more easily than using a car GPS system.

* This function depends on the Smartphone used.

A completely versatile solution

The Parrot MINIKIT *Smart* was designed to adapt to most Smartphones, no matter what OS they are running: Android, Symbian, Apple iOS, BlackberryOS etc. Its adjustable arm can accommodate and hold any Smartphone up to 2.75" wide, while its suction foot ensures that it can be attached absolutely securely to the windshield or dashboard. It comes with an intuitive user interface featuring two telephone buttons and a rotary button. Its integrated lithium-ion battery supports a battery life of more than a week. It can be recharged via a 12V cigarette lighter and can also recharge your Smartphone using the USB port. Last but not least, it is 100% *Bluetooth* compatible and works with all brands of Smartphones and *Bluetooth* devices.

Bluetooth hands-free charging holder for Smartphones

for Smartphone

Wireless technology

Bluetooth

Bluetooth wireless technology enables voice and data to be sent via a short-distance radio link. It connects a wide range of electronic equipment without requiring additional cables. Furthermore, it extends the communication possibilities for mobile phones and a large number of devices. The Bluetooth stereo (A2DP) profile uses the same radio frequencies and can be used to send music tracks from one device to another.

Technical and commercial specifications

Parrot MINIKIT Smart

Bluetooth hands-free charging holder for Smartphones

General

- Number of contacts: 2,000 per Smartphone
