

PARROT MKi9200™

Made for
iPod iPhone

A complete system dedicated to in-car calls and music.

The Parrot MKi9200 is a **Bluetooth** hands-free system with a 2.4-inch high-resolution TFT color screen. A wireless remote control can be positioned on the steering wheel or dashboard and allows the driver to control all the functions of the MKi9200. In addition to conventional telephony functions - pick up, hang up - the Parrot MKi9200 boasts cutting-edge telephony functions: automatic phonebook synchronization, learning-free multi-speaker voice recognition, speech synthesis of the names in the phonebook, contact management (up to 2 000 per phone), call records, and so on. Its color screen displays the phonebook music management + display, caller ID and photo, phone information and user settings. The menus and phonebook are also audible for easier, more intuitive use.

Listen to your digital music in the car

The Parrot MKi9200 is also gifted for music. Supplied with a specific cable, it is compatible with all music sources, such as iPods, iPhones, USB flash drives, **Bluetooth** stereo (A2DP) phones, MP3 players and any other analogue players. The Parrot MKi9200 also features an SDHC-compatible SD card reader on the side of the screen. The MKi9200 displays the full playlist along with the name of the artist, the title and even the corresponding album cover in color when available on the iPod, iPhone or USB flash drive. Music is delivered through all the car's speakers, giving the driver and passengers exceptional sound quality and the breathtaking Virtual SuperBass and Sound Spatializer effects.

Dual microphone for crystal-clear calls

To ensure optimal audio quality when on the phone, the Parrot MKi9200 combines dual microphone technology with new signal processing software (DSP-3) that eliminates background and surrounding noise, including noise from inside the car. For maximum listening quality, conversations are reproduced over the vehicle's speakers.

The Parrot MKi9200 is a **Bluetooth** hands-free system compatible with all vehicle makes and which works with all mobile phone brands.

Made For iPod & Works With iPhone

For hands-free calls in your car with your iPhone, enable **Bluetooth** so that it connects with the Parrot MKi and synchronizes its phonebook.

To listen to the music on your iPhone or iPod, simply plug in the Parrot MKi cable. Open your playlist using the wireless remote control. You can still make hands-free calls in the car with your **Bluetooth** mobile phone. When a call comes in, the music is automatically muted, only to be switched back on at the end of the call.

Bluetooth advanced hands-free music system

for mobile phone
for PDA, smartphone
for MP3 player
for USB
for analogue music players

Wireless technology

Bluetooth

The *Bluetooth* wireless technology enables voice and data to be sent via a short-distance radio link. It connects a wide range of electronic equipment without requiring additional cables. Furthermore, it extends the communication possibilities for mobile phones and a large number of devices.
