

PARROT RKi8400™

Parrot RKi8400: The car stereo made for your iPhone
Make hands-free calls easily using voice recognition, charge and store your iPhone/iPod, and enjoy incredible sound quality whilst streaming and listening to your favourite music.

Made for
 iPod  iPhone

Hands-free phone book access and conversations

The very first time you connect your Bluetooth-enabled phone the Parrot RKi8400 automatically copies the contacts in your cell's phonebook. To make a call, simply use the voice-recognition function (by pressing the green button) and say the name of the person you want to call. If you prefer, the RKi8400 can also read the names in your phonebook over your car stereo as you use the dial. Simply confirm the person you want by pressing the button to select and the Parrot will dial automatically. To hang up an incoming call, just press the red button.

Exceptional sound quality in your car

Equipped with a 200 W MOFSET amplifier, the Parrot RKi8400 will enhance your in-car musical experience. Totally integrated into the vehicle's audio system, music and conversations are transmitted via the speakers for superior audio quality. To make the experience even more enjoyable, the RKi8400 has a built-in equalizer and includes sound effects that can be adjusted to fit any style of music.

Instant access to all your digital music

The Parrot RKi8400 is the perfect companion for your digital music. Thanks to its special cables, it can support any musical source you have: iPod, iPhone, USB flash drive, SD cards, Bluetooth stereo (A2DP) peripherals, or any other analogue player. You can easily browse your music library by playlist, artist or song while viewing album covers on the color screen.

Elegant design and wide color screen

The RKi8400 has a removable front panel which combines smooth matte black with classic chrome highlights. Browsing menus and accessing the unit's main functions is more intuitive than ever using the elegant rotary button. The high-definition 2.4" color screen clearly displays your menus options, phonebook, music etc.

A storage compartment for your peripherals

A convenient storage compartment is located behind the RKi8400's removable front panel, ideal for securing your phone, MP3 player or USB flash drive. A special lining provides your devices with excellent protection, even under rough or winding road conditions. To access your peripherals more quickly, use the auto-insert mechanism on the front panel. The insertion process is easy and can be done using only one hand.

Advanced *Bluetooth* car stereo and hands-free system

for mobile phone
for PDA, smartphone
for MP3 player
for USB devices
for analogue music players
for SD & SD/HC cards

Wireless technology

Bluetooth

Bluetooth wireless technology enables voice and data to be sent via a short-distance radio link. It wirelessly connects a wide range of electronic equipment including mobile phones, computer, and many other electronic devices.
