

FOR STEERING WHEEL CONTROL OF PARROT CK3000 EVOLUTION™ AND CK3100 LCD™ CAR KITS

CAN BUS KIT

Technical and commercial specifications

Parrot MULTICAN

Steering wheel mounted control kit

Voltage specifications

Operating current: 12 volts (DC)
Maximum power consumption: 30mA
Stand-by mode: < 1mA

Dimensions

Length: 2.25 in. (57 mm)
Width: 2.25 in. (57 mm)
Height: 0.75 in. (20 mm)
Weight: 3.5 oz (100 g)

Package content

1 Parrot MULTICAN control box
1 R-Ladder bus cable
1 Female bullet terminal connectors
1 Installation guide

Documentation

Directions for use, user guide on our site:
www.parrot.com

Hands on the wheel

The Parrot MULTICAN kit adapts a vehicle's existing steering wheel audio controls to work with a Parrot *Bluetooth*® hands-free car kit. The components and wiring are hidden from view, so original equipment appearance is preserved. Steering wheel controls will retain their original control functions, and will also control the Parrot car kit main functions without interference.

OEM compatibility

Designed to work on a variety of CAN bus equipped vehicles, the Parrot MULTICAN is currently compatible with 15 makes. For the most up-to-date vehicle coverage information, visit: www.parrot.com

Complete control

The Parrot MULTICAN is designed to integrate perfectly with steering wheel audio controls. If there aren't enough control buttons, the MULTICAN will designate a combination of buttons to compensate for it. The use of a Parrot MULTICAN with a Parrot hands-free car kit brings all calling controls to the steering wheel where the driver's hands and fingers already are. Intuitive use of the controls helps drivers stay calm cool and connected.

About CAN technology

Controller Area Network (CAN) technology is a serial bus standard originally developed in the 1980s by Bosch for connecting and interfacing electronic control units. CAN was specifically designed to work in the electromagnetically 'tough' environment found in vehicles. Today, the CAN bus is used in many embedded control environments that require strong protection against magnetic field interference.
